RELIABLE

AND

Are always in the lead with LOWEST PRICES AND BEST GOODS. Don't fail to call on us if you want first-class goods at rock-bottom prices. Our stock is the largest ever brought to Hopkinsville, and comprises everything in the way of

Boots, Shoes, Hats, Caps, Ladies' and Gents' Furnishing Goods, Trunks and Valises! Dry Goods.

People wonder how we can sell goods so much cheaper than our competitors. It is simply this: Our Mr. Frankel is always in the market with the ready cash in his pocket, and takes advantage of bargains which is always given him by the wholesale merchants who run short of funds. Our clothing this season can not be surpassed. It is equal to any merchant tailoring goods in the country, having been made by the best merchant tailors in New York. We took advantage of the dull summer when tailors were idle, and had them make our goods at a very small expense, which enables us to give you Custom-Made Clothing at about one-half the original merchant tailoring price.

DRY GOODS .- Our entire stock of Dry goods was purchased early, before the great rush. It was selected with great care, and lacks nothing. The low prices at which we are selling them will astonish the very closest buyers. BOOTS AND SHOES .- This ent're line was purchased direct from the factory at jobbers' prices, we are therefore able to sell them at same prices that other merchants pay.

HATS AND CAPS .- This department can not be equaled in this or any other section. We have everything that is made in the Hat or Cap line-all the latest styles for men, youths, boys and children.

The largest stock of Trunks and Valises can always be found at our mammoth establishment. We ask you to call and judge for yourself how cheap they are being sold.

In addition to our large and extensive retail department, we have opened an extensive WHOLESALE ROOM, where we always keep a large surplus stock for supplying country merchants. We will duplicate any Louisville, Cincinnation Nashville prices. Country merchants would do well to call on us. Don't be led astray, but call and see what we advertise are plain facts. "The Old Reliable."

M. FRANKEL & SONS.

SCIENCE AND INDUSTRY.

-A factory in Elmira, N. Y., "turns" out between two hundred and three hundred augers daily, and is the only industry of its kind in the State.

—A Georgia farmer, after making practical experiments, announces his belief that an acre of meions will yield as much syrup as one of sugar-cane, while the former does not tax the land near so heavily as the latter. The syrup has a reach flavor. has a peach flavor.

-We have in the Southern States in operation, or in course of erection, 191 cotton factories. This outnumbers by twenty-seven all the cotton factories in New England, outside of Massachusetts, and exceeds by sixteen the number in that State.—Pulaski (Tenn.)

-A Maine man has invented and constructed a great improvement on the Indian birch canoe, being made of tin, and to avoid the great danger of upset-ting or filling with water and sinking, or being swamped in rough water, he has conveniently arranged on either side a series of air-chambers.

—To remove fish-bones from the throat, Professor Vololini, of Breslau, recommends a gargle composed of muratic acid, four parts; nitric acid, one part, and water, 240 parts. The teeth have to be protected by lard or oil. The fish-bones become flexible, and they disappear entirely after a short time.

appear entirely after a short time.

—An invention has recently been made which provides an escape-door to be located at the side of railroad passenger-cars, to be used in case of accident when the doors at the ends of the car have been closed by the telescoping of the car, or by the abnormal abument of the timbers from any cause. This door is hinged at the bottom, and the fastening appliances are so simple that any one, without previous instruction, can open it in case of accident.—Cincinnati Times.

—To build a ship so that in case of

-To build a ship so that in case of accident to the bow the stern half can be instantaneously separated from it, and can continue the voyage securely and easily on its own account, is the latest contribution to the list of safeguards against the dangers of the sea. The idea is that of a German inventor, and is set forth with consecurity to the sea. and is set forth with some detail in the Hamburg Courier, which sees no reason why it should not be entirely feasible. It would require many departures from the present mode of building vessls, as well as from their internal arrangement and equipment; but the inrangement and equipment; but the inventor asserts that, as a whole, a vesses o constructed could be fully as seal worthy and swift as any built on the present plan, and would be twice as secure against disaster.—N. Y. Sun.

Our Sea Farms, . "

Prof. Huxley says that our deep-sea fisheries can never be exhausted. The entire catch of codfish on the coasts of Norway and the United States is but an insignificant fraction of the myriads of that fish which visit the northern shores of Northern Europe and Eastern North America. The annual eatch of herring would not supply a week's con-sumption to an ordinary shoal of codsumption to an ordinary shoat or cod-fish, and yet as much herring is eaten by man as all other fish put together. An acre of water will supply more food for man than an acre of the best arable land. There is a shallow lagoon in the Adriatic Sea covering 70,000 acres of Adriate Sea covering 70,000 acres of surface. For a great number of years it has added live hundred weight of fish to the acre—about double the quantity of food that can be derived from the most fertile land. Hence, oceans and deep seas can always be depended upon to supply unlimited quantities of food to mankind, no matter how dense the covulation of the globe may finally population of the globe may finally become. But this remark does not become. But this remark does not apply to in-shore, lake, and river fisheries. The supplies of salmon, shad, oysters, and lobsters can be reduced, unless the waters are intelligently restocked. Prof. Huxley paid a high compliment to the United States for the paradent treatment, of its streams and prudent treatment of its streams and coast lines in the re-stocking of delicious fish. The labors of Prof. Baird and his Fish Commission have been of immense benefit to the present generation, and will be of still greater advantage to the generations which are to follow.—
Demorest's Monthly.

There are more persons to a family in Georgia than in any other State, it is

How Boston Newspapers Were Deceived.

Here is a mystery. In the announce-ments of Sunday services in the Trav-eller Saturday afternoon was a notice eller Saturday afternoon was a notice that Rev. Brooke Herford would preach at the Arlington Street Church on Sunday, and the text and the subject of the discourse were given. At the church on Sunday morning there was no sign of life except the presence of a number of persons who waited in vain for the church to be opened, and were not satisfied until it was proved to them that as Mr. Herford would not reach Boston from Europe for nearly two weeks, his preaching of the sermon announced in the Arlington Street Church on Sunday, September 9, would be an impossibility. All might have ended there with the verdict that the announcement was a mistake, but this morning a rewas a mistake, but this morning a re-port appears in the Herald which be-

port appears in the Herald which begins:

"At the Arlington Street Church, in the forenoon, Rev Brooke Herford preached upon the 'Christian Value of Business Life.' taking his text from Proverbs xxii:29: 'Seest thou a man diligent in his business?' He shall stand before Kings.' The preacher began," etc.

And then follows a half-column report of the sermon. The advertisement is easily accounted for, but what about the report of the sermon? Here is the best explanation that can be given. The Commercial Bulletin had in its possession a copy of the sermon in question, which was preached by Mr. Herford some time last spring. It was announced last week that the Bull'ctin would publish the sermon in full on Saturday. From that announcement must have come, in some way, the notice that the sermon would be delivered on Sunday. But how about the report? The only way to account for that is that the Herald, possessing a copy of the Commercial Bulletin of Saturday, made a neat abstract of the sermon, brought the time of its delivery down to date, after the fashion of recent Paris sermons received by cable, and published it.—Boston Journal.

Journal.

—Mr. John R. French, ex-Sergeant-ta-Arms of the United States Senate, is delivering throughout the country a lecture entitled "Ten Years About the Senate." It contains a series of intersente." It contains a series of intersente." It contains a series of intersente. The domestic life of Etelke Gerster shows that she is a home-loving woman as well as a great artist. Her uncle, Anton Gerster, is a carpenter in Prospect Park, New York, and he says, not withstanding the fact that she has been feted by ill the principal potentates in the world, she has not grown proud and will comprise three large volumes. The first volume was ready for publication before his death, and the others will probably be compiled soon. Literary men are already familiar with the great force displayed in everything the eminent jurist wrote, and will welcome these volumes as valuable acquisitions to their libra

Remove the Old Canes of Raspberries.

Charles A. Green, one of the best fruit-growers, says he used to think it of little consequence when the old canes of black caps were removed. But recent experience and experiment has convinced him that they should be removed as soon as the fruit is gathered. The old canes may be cut easily with a sharp hook attached to a handle two feet long, and after they are removed and burned the field may be more freely cultivated than if they were still in the

But aside from this, the old canes ap pear to draw on the vitality of the plant and seriously affect its subsequent pear to draw on the vitality of the plant and seriously affect its subsequent capacity for bearing fruit. It is now held by scientific men that a dead branch exhausts the vitality of the tree as much as though alive. The dead canes on raspberry bushes would appear to affect them in like manner. Bushes not cleared of old canes produce small, defective, crumbling specimens. The first year or two the bushes are not so seriously affected. Hereafter we will trim ours as soon as the fruit is gathered, sweep them out of the spaces between rows with a one-horse rake, similar to a steel-toothed hay-rake but very short and no wheels, and save the ashes.—Detroit Post and Tribunc.

It it easy to perceive why bees can not thrive well on a sheep pasture. Sheep eat everything down very closely, and leave nothing in the shape of a flower upon which bees can subsist. There is no other reason for the popular that there is no other and here will not lar belief that sheep and bees will not thrive together. The bees will not hurt thrive together. The tees will not hurt the sheep in any way, but the sheep leave nothing for the bees to pasture in; that is the only difficulty, and where other feeding ground is provided for the bees than the sheep pasture, sheep and bees would thrive very well together.— N. Y. Graphic.

—A short time ago a little boy went with his father to see a colt. He patted the colt's head and made quite a fuss over it, until the stableman told him to over it, until the stableman told him to be careful that the colt did not turn round and kick him. When young Hopeful went home his mother asked him what he thought of the colt. "I like him pretty well," was the reply. "He's very tame in front, but he's awful wild behind."—Harper's Bazar.

PERSONAL AND LITERARY.

In six months 7,058 books in the German language have been published, making an average of 45 works a day. -A Mrs. Cox, who is said to be a sister of George W. Cable, the novelist, is making a reputation for herself in New Orleans as a painter of animals.

-"Shakespeare's Bones" is the un-canny title of a volume by Dr. Ingleby, who, despite the poet's curse, wants to dig up his bones in order to settle some questions about the busts, portraits and death-mask.—Chicago Journa!.

—C. P. Huntington, the great railroad magnate, was a poor boy and a
hard-working young man. He did not
begin to accumulate his immense fortune until he was past forty, when he
staked all his savings on the scheme of
the Pacific Railroad. — Indianapolis

How Granite Columns are Polished.

The word "granite" generally conveys the idea of roughness, coarseness and solidity. The idea of finish, smoothness and polish does not, in the popular mind, belong to the material. But most hide of granite are susceptible of a kinds of granite are susceptible of a beautiful and almost faultless surface finish. The effect of this finish in con-trast with the hammered faced granite, on monuments where a tablet is surface polished, or lines of lettering are in brilliant contrast with the dull gray of the unpolished stone, is very fine, espe-cially so when the shafts of columns are thus finished, the bases being hammered and the capitals carved. As this finish can now be obtained by machinery at a low cost, the possibilities of obdurate granite for ornamental as well as for building purposes have been greatly enlarged.

Granite columns, vases and similar Granite columns, vases and similar cylindrical ornaments are polished in a lathe. This differs but little from an ordinary machinist's lathe, except that a continuous bed is not necessary to hold the lathe heads, that the spindle of the foot stock revolves as well as that of the head stock, and that no tool carriage and appurtenances are required. The beadstock is furnished like that of the and appurtenances are required. The head-stock is furnished, like that of the head-stock is furnished, like that of the ordinary back-geared lathe, with a back shaft, on which is the driving pulley, or the cone of step pulleys, from which the spindle is driven by means of a gear and pinion, the surface speed of a column under process of grinding and polishing tring from 230 to 240 feet per minute, ag to a twelve-inch column about seventy-seven turns per minute and to a thirty-six-inch column about twenty-five turns per minute.

To center and swing a column in the

To center and swing a column in the lathe the stone has a square recess cut in each end, into which is fitted a block of east iron with round hole through its center. The place of this block is found by means of a cross of wood with sliding arms on each of the four limbs of the cross, the arms projecting over the surface of the column longitunalty, and when equidistant from the center denoting the place of the center block, so that the true center of the column or of east iron with round hole through its center. The place of this block is found by means of a cross of wood with sliding arms on each of the four limbs of the cross, the arms projecting over the surface of the column longitunalty, and when equidistant from the center denoting the place of the center block, so that the true center of the column or shaft is found, just as it is on an iron shaft, from the circumference. The iron block is secured in place by a running of Babbit metal, or a similar unshrinking compound, around it. The centers of the lathe spindles fit the holes in the of the lathe spindles fit the holes in the blocks, and when swung to the lathe the column is rotated by means of a lug or dog on the face plate engaging with one seated in the end of the column.

Back of the lathe is a wall of plank against which rest the ends of a num-ber of iron blocks, three or four inches diameter, long enough to project over the column and to have their rear ends resting against the bulkhead or wall. Their under sides are concaved to embrace the column one-fourth of its diameter or less, and as the motion of the column in grinding is reverse to that of the ordinary lathe, the blocks are held against the wall by the rotation of the column. These blocks are arranged closely side by side, and when the col-umn is first worked its irregularities of eniseling and unevenness of contour eniseling and unevenness of contour make these blocks play up and down like the movement of pianoforte keys under the fingers of a performer. But as the grinding progresses this irregular movement becomes a very slight undulation, pleasant to see.

A trough runs under the column its entire length, and from it an attendant shovels beach sand and water on the revolving column, the blocks with their revolving column, the blocks with their concave faces acting as grinders, just as the hinge clamps of the machinists are used in polishing a turned shaft. And like the clamps, the series of blocks are occasionally pushed along one-half of their width to avoid rings of the contract of the country and is used of roughness. This quartz sand is used until all the bruises, "stunts," and chisel marks are taken out, and the surface shows a uniform color. Then the trough is cleaned and emery of the numbers forty to sixty, according to the quality of the stone, is weighed out in the proportion of about half a pound the proportion of about half a pound to every superficial foot; thus a column of ten feet in length by three feet diameter—ninety superficial feet—would require from forty-five to fifty pounds. This is all weighed out at one time, and is never added to during the entire process. Mixed with water, it is fed to the grinders by the shovelful, over and over, until the grinding is entirely completed. The reason for this is evident from the fact that in using. completed. The reason for this is evident from the fact that in using, the emery becomes ground up and emerged in their presence.

mixed with the detritus of the granite and the particles of the iron blocks or grinders, and after a time is a pasty mass, losing much of its original sharp gritiness. If, now, fresh, unused emery was added, the effect would be to scratch the half-finished surface.

When the grinding is finished the common cast iron grinding blocks are removed and others are substituted removed and others are substituted having their embracing under sides faced with felt. To these is fed the ordinary marble polish of oxide of tin and water until the surface of the column shines like glass and reflects like a mirror. The entire time required to polish granite columns—dependent on the exactness of their chiseling—is from forty to fifty hours, diameter and length making but little change, as the work is simultaneous and the surface speed a constant.—Scientific American. speed a constant .- Scientific American.

Foretold His Death.

Dr. Frank L. Rea, assistant demonstrator of Anatomy in the College of Physicians and Surgeons, died on Friday at the residence of his uncle, Dr. R. L. Rea, No. 112 Monroe street, of malignant facial carbuncle. When R. L. Rea, No. 112 Monroe street, of malignant facial carbuncle. When quite a young man he came to this city, and entering the Chicago Medical College, graduated in 1882 with high honors. He was elected upon competitive examination an interne of St. Luke's Hospital, where he remained until the expiration of his term of service in April of the present year. Soon after leaving the hospital he was appointed assistant demonstrator of Anatomy in the College of Physicians and Surgeons, and also an attending physician to the West Side, free dispensary. His death, by its cause, has attracted a great deal of attention from medical men in the city. The history of his that is the last of me. It is a facial carbuncle. I will lock up my office bid you good-by, and go home to die." The druggist laughed at him, but the young physician locked his door and went away, leaving a card that he did not know when he would return. He went at once to his nucle's house and went at once to his uncle's house told him what he had experienced, adding the remark: "I am done for. will never have another well day and will be dead in ten days." The family laughed at him, and he retorted by drawing out his diary and writing the following: "Carbuncle started on my lip. I know what it means. No postmortem, if you please." Beneath the entry were two numbers corresponding to pages in a standard author in which the remarkable fatality of the disease is spoken of. The doctor had got his in-

the remarkable fatality of the disease is spoken of. The doctor had got his intimate acquaintance of the disease by treating the case of a fellow student, Mr. Esgle, which ended fatally at the hospital a year ago. After making the entry he persisted in talking of his approaching death and made all his plans. Everything was done to distract his attention, but without avail. The sore was opened and cauterized a week ago last Friday. Another pimple appeared about the same time on the other side of his lip. A day or two afterward it was opened and cauterized. The disease remained indifferent for a day or two. The temperature then arose to two. The temperature then arose to 104 and the pulse to 140. He went to his bed on Monday and was in a comatose condition from then until he died, five days later. Death was due to the facial veins absorbing the poison of the sore and carrying it to the brain, where sore and carrying is to the brain, where it formed a fungus growth that put him to sleep, and by the sympathy of the nerves caused his features to swell beyond recognition, the eyes being pried almost out of the sockets.—Chicago -Officers ransacked a house for hours

in vain at Lake View Canada, without finding the murderer whom they sought.

The man was all the while lying under a heap of soiled linen in the middle of the kitchen floor, and when he thought

--Butter Pie: Cover the pie-plate with crust as for custard pie; take a piece of butter the size of an egg, one cup of sugar, one cup sweet cream, one teaspoonful flour; mix butter, flour and sugar together, add cream, bake till brown.—

Detroit Post.

Fruit growers should remember that black knot on the plum is most effectually cured by prompt use of the knife, cutting away all diseased parts, which should be burned. Cut below the affected portions. If neglected loss of the tree will surely follow.—Cincinvent Tree will surely follow.—Cincin nati Times.

—Imperfect sweet apples, which are not suitable to bake whole, may be made a delicious dish. Pare and slice the best part of the apples, put them in a pudding-dish, add enough water to cover them; when tender serve with sugar and cream.

—An experienced farmer says that oats should be soaked sufficiently to swell before feeding them to stock. When soaked the husk is partly torn away, and facility of digestion increased. Poultry will carefully pick out the soaked grains from the dry when allowed a preference in the matter.—Troy (N. Y.) Times.

—A correspondent of the Country Gentleman says: "A heavy crop of clover is sure death to daisies. They seem ver is sure death to daisies. They seem to be smothered by the ranker growth of clover, and fail to mature their seeds. In a field where there is a growth of daisies a generous use of fertilizers, especially of barnyard manure, and keeping the field seeded to clover, using an extra quantity of seed for this purpose, and breaking up every two years, cultivating for awhile and again seeding to clover thickly, will finally eradicate the

—Hearken to me now, all lovers of good things. Make a layer cake after this rule: One-half cup of butter, two cups of sugar, the whites of four eggs, cups of sugar, the whites of four eggs, one cup of sweet milk, two small teaspoonfuls of baking powder, and three cups of sifted flour; bake in layers; spread between these layers peaches cut in very thin slices; then pour over these sweet cream whipped to a stiff froth and sweetened with pulverized sugar. Of course this cake will not keep, but should be made the day it is to be eaten, and it is better not to put the peaches and it is better not to put the peaches and cream in until a little while before the cake is to be served .- N. Y. Post.

Sweet Corn.

• To keep sweet corn in good condition it should be husked as soon as gathered, and then placed in an ice-chest until wanted for cooking. When left in the husk the juices of the grain are gradu-ally absorbed by the husk, and then the people say the corn is not sweet this year. Market farmers gather corn in the afternoon, pack it into barrels and load into wagons, where it is left all night ready for an early start in the night ready for an early start in the morning. Under these circumstances the corn frequently heats, and the corn is greatly injured. Some day corn will be husked as gathered, and brought to market in refrigerator wagons, and then city people will have corn as good as that eaten by their friends who have gardens of their own. Corn thus treated may be kept in a refrigerator for a week without loss of its good qualities.

—Boston Post.

-Miss Ella Maloy, of Milford, N. Y., had a matinee recently that will dwell in her memory as long as life abideth in her body. During a storm, light-ning struck her on the feet, knocking her senseless. Her shoes were torn off her senseless. Her shoes were torn off her and flung some distance away. The fluid then ran up her body, removing her clothing as it went, cut off her hair as though it had been done with a pair of shears, singed her eyebrows, and then went on its merry way rejoicing. Miss Maloy was considerably burned but not fatally.—N. Y. Graphic.

Mr. J. S. Phelps of Louisville, is in the city.

Miss Lula Watkins is visiting at Mr. E. B. Long's.

Mr. M. Frankel, of Cincinnati, is in the city shaking hands with his numerous friends.

Miss Fannie Trigg, of New Harmony, Ind. is, visiting at Mr M. W. Grissam's.

Mrs. Dr. Welborn, Mrs. Robb, and Miss Lona Robb, of Indiana, are the guests of Mrs. M. W. Grissam.

Mrs. W. S. Davison, of Strawberry Point, Iowa, is visiting the family of her father, Mr. Jas. E. Jesup.

Mr. John A. Wallace, of Texas, was the guest of his brother Col. Jas. A. Wallace last week.

Miss. Ella Pratt of Madisonville, and Miss. Mary Warfield, of Casky, are spen ling the week with Mrs. M. E. Rodgers.

Mrs. M. E. Rodgers, the Nashville Street milliner, has returned from the east with a full line of millinery goods for the fall trade. Miss. Ida Allen returned with her and will be her trimmer again this season.

Mr. and Mrs. E. Boyd Faulkner, of Martinsburg, W. Va. returned home Tuesday. They were accompanied by Misses Emma and Sallie Campbell, who will spend the winter with them.

What an Editor Says of the Show.

The editor had the pleasure of witnessing the exhibition of S. H. Barrett & Co.'s Mammoth Circus, at Mt. Sterling, a few days since, and is glad to say it is one of the largest and grandest ever put upon the streets of any town. The menagerie consists of a great number of rare animals of almost every variety on the face of the earth- such a collection as has never before been seen buy till after this week; you might with any traveling show. Mr. Robert Stickney who has always been a general favorite was perfection, and Miss Emma Lake was both daring and graceful. The horizontal bar performances, by the Renos, was excellent and deserved a larger notice than we have space to give them. The clowns are the funniest fellows who ever donned a motley garb, and the feats of the Malay Prince attracted especial attention. Everything connected with this show is noticeable in elegance and refinement-Lexington advertiser.

THE FLORAL HALL.

The facts will bear us out in the statement that the disylay in the Floral Hall, and especially the art display, is the finest for years and we doubt if it has ever been equaled. The Hall is not crowded but the articles on exhibition are of the hand-The wax flowers, the crayon pictures, the cut flowers, the needle-work arti- only 10 cents and 25 cents for the use cles, the laces embroidery etc. are all of skates. Don't fail to attend. very elegant and handsome. The preserves, pickles, wine, etc. etc. lool well enough but at the present writing deponent is unable to testify concerning their taste. In one corner of the Hall Mr. C. B. Webb has a display of Saddlery. The quilts and counterpanes are very beautiful to look upon, but if the director in charge will allow us to advise him, we would suggest that cords be stretched and these articles hung parallel with the counters, as some of them flap clear ocross the promenades within a few feet of the floor, ling to the names will be placed in one being hung over the beams. The box and tags representing the prices premiums in this department will be awarded to-day.

LOST BOOK.

A memorandum book with the name of Juo. W. Richards on the back was lost somewhere on the streets of Hopkinsville, Taesday Oct. 2. The finder will be, liberally rewarded by returning it to McKee &

M. O. SMITH & CO.

The Southern Mutual Life Insurance Company, OF LOUISVILLE, KY.

J. B. TEMPLE, President

L T. THUSTIN,

HOPKINSVILLE, KY.

It is a Kentucky Company and Kentuckians Should Patronize It!

In town. Don't forget the place.

Nashville St., near Depot.

The following notice is from the Insurance Commissioner's report for 1882: "A comparison of the statement of this company with that of the preceding year will show to its patrons that the confidence extended by them to its management has not been misplaced. Its investments are judiciously made. The management, whilst liberal, is prudent and conservative, and its ability to carry to maturity its contracts is not a matter of doubt, but always capable of a practical demonstration. It should be a matter of State pride that this institution, the only one of its kind operating under a Kentucky charter, and holding in trust such a large sum for our citizens, should be fostered and upheld by the people of this State."

fort is more in hoteline friction of the ferrer in for the ferrer in forther ferrer in the ferrer in ferre

The later-reports from Java seem to reise the volcanic convulsion there to the rank of one of the most destructive the rank of one of the most destructive calamities known in the history of the human race. The loss of life in the great earthquake in Lisbon in 1755 was variously estimated at from 40,000 to 60,000. The earthquake of just a hundred years ago in Calabria, the southern part of Italy, caused a loss estimated by some at 40,000, by others at 100,000. Discrepancies like these illustrate the difficulty of learning exactly trate the difficulty of learning exactly the extent of such terrible disasters, inthe extent of such terrible disasters, involving great populations and extensive tracts of country in a common ruin. We shall never know, probably, with any degree of definiteness the less of life in Java, but if the reports are not grossly exaggerated this calamity will stand in history with those of Lisbon and Calabria, and may even outrank them. Reside it the recent earth analysis them. Beside it the recent earth quake at Casamicciola sinks into insignificance. One thing making it highly probable that there has been a vast loss of life is the density of the population in Java. This is as great as that of the most populous countries in Europe, the island possessing, with its rare natural beauty and mild climate, a population ex-ceeding that of all the other islands of the Indian Ocean together.

The occurrence will be of deep inter est to scientific men for the light which it may throw upon the relations of vol-canic cruptions and earthquakes, and the causes of both, after which science is still groping a good deal in the dark. The visitations at Lisbon and in Calabria were earthquakes, and the former was remote from a center of volcanic action. The latter has been supposed to be related to disturbances in Vesuvius. As a rule, however, the most destructive earthquakes have not been in volcanic regions, while on the other hand earthquakes are most common where volcances are most numerous. It is not believed that earthquakes are the result of volcanic eruptions, but rather that both are manifestations of the same forces. The convulsion of nature in Java combines the characteristics of both. Extraordinary eruptions of volcanoes were accompanied by violent changes in the earth's surface, high islands or mountains sinking into the sea and a great uprising of the water, as at Lisbon, engulfing large numbers of people, sweeping away lighthouses and destroying towns. One of the more famous eruptions in the history of Java illustrated the fact that volcanic action may often be in progress over a large territory. This was more than a hundred years ago, when an eruption of Papandayang, one of the largest of the volcanoes, overwhelmed with ashes an area of a hundred square miles, killing three thousand people. There were simultaneous eruptions from two volcanoes respectively 184 and 352 miles from Papandayang, although those close at hand were silent. The present disturbance, about which the news is still vague, seems to have extended over a considerable territory

The Island of Java, being crowded, so to speak, with volcanoes, illustrates the fact just mentioned regarding the frequency of earthquakes where there are many volcanoes. In 1878, record was made of sixteen distinct earthquakes throughout the island. The latest serious disturbances seem to have been four years ago, when there were several severe shocks, with a considerable loss of life, in the Preanger Regencies. The authentic record of earthquakes and eruptions in Java runs back for more than a century, and makes a gloomy recital. Here may be found other illustrations of the wide variations in the reports of such lesses The destruction of life by the cruption of Mount Gallunggong in 1822 is put down by some authorities at 20,000; by others at 4,000.

It will be observed that the disturbances in Java, like those of Ischia, fit into Mallet's theory that the proximity of the sea, or some large body of water, is a necessary element, either in earthquakes or volcanic eruptions, an out-break of igneous matter beneath the sea resulting in the generation, and then the condensation of vast volumes of steam, which excite volcanic center, or set the earth itself in motion. The convulsions reported are close upon the northwestern coast. It is to be considered also as bearing upon the frequency of eruptions in Java, with relation to the nearness of the sea, that the greatest breadth of the island is only 121 miles .- N. Y. Tribune.

Advertising a Patent Shirt Bosom.

Sauntering over into Broadway came across a man coolly and deliberately undressing himself. He looked respectable, was fashionably dressed, and bore no indication of inebriety or insanity. He took off his coat and hung it carefully on a railing. Then he did the same with his vest. His he did the same with his vest. His cravat and collar were next slowly removed. A crowd had by this time gathered. His strange movements were watched in amazement. He slipped the suspenders from his shoulders, and at that rather advanced stage of the proceedings came to a stop. "You will proceedings came to a stop. "You will observe, gentlemen," said he, in a loud, oratorical voice, "that my shirt is a remarkable one. Its bosom is detachable. Not that it is for deceptive purposes, to enable a man to appear to wear a clean shirt when, for a fact, he has on a soiled one, though there's no law against it, but it is the greatest hot-weather comfort ever invented. See here! The bosom is attached only at top and bottom, leaving the sides free; and you all know that by removing the pressure of the shirt on the chest—," and so on, to the end of a long and rhapsodical ex-planation of the device.

Having thoroughly advertised the new shirt to that assemblage, he dressed himself and passed on.

"Rather an embarrassing sort of calling," I remarked to him, as he gave a finishing touch to his readjusted

cravat.

"O, its like any public profession," he replied, with manifest condescension. "One feels some diffidence—a kind of stage fright—until assured of one's ability to get through with it, but confidence and skill beget each other. All except artists will tell you that."

Evidently he was not to be pitied.—
Cor. Chicago Inter-Ocean

No. 23 PUBLIC SQUARE,

There died in the hospital of the Alms-house this evening a woman who was known on the register as Emma Thompson, but whose career a quarter of a century ago under the name of Emma Jacobs had a national notoriety. She was born in Lancaster County over She was born in Lancaster County over seventy years ago. Her life in Phila-delphia began at an early age, and it was in this city that she started her re-markable career. Her powers of fascimation were marvelous, and some of the most prominent men in the country vied with each other to win her smile

The amounts of money she received from these men aggregated thousands and thousands of dollars. Her beauty and thousands of dollars. Her beauty is said by those who remember her in her best days to have been of a type that compelled admiration from all who saw her, and Daniel Webster said of her: "She has the most perfect carriage of any woman I have ever seen." She held court for gentlemen of leisure as well as lawyers and men of letters, her house being the resort, at times, for some of the brightest intellects of the some of the brightest intellects of the

While Congress was in session it was her custom to go to Washington, and it was there that some of her most rewas there that some of her most remarkable conquests occurred. She is said to have completely fascinated at least one President of the United States, and nearly all the leading men in Washington from 1850 to 1860 made her rooms a rendezvous. So great was her influence over the members of Conher influence over the members of Congress that her value as a lobyist was known to corporations and individuals, and many important bills were passed through her instrumentality.

through her instrumentality.

Probably the only man who ever won her affection was a preacher named Thompson, a Virginian, whom she married. Thompson afterward lost his reason and was placed in the insane ward of the almshouse, where he died three years ago. Previous to this event Mrs. Thompson's charms began to fade and she had disappeared from public notice. Her old-time shrewdness seemed notice. Her old-time shrewdness seemed to disappear, and in a few months she lost nearly all she had spent her life in acquiring. Her properties on Cherry street were gradually encumbered with the street were gradually encum-

bered with mortgages, and finally, los-ing them, became absolutely in want. During Thompson's incarcertion in the mad-house his wife visited him nearly every visiting day, constantly sup-plying him with an abundance of deli-cacies. Her face was well known to the officials of the institution, and she was supposed to be worth considerable

On the 28th day of November, 1881, she presented herselt at the gateway of the institution, with the remark that she had come to stay. The gate-keeper was surprised, and refused to believe her statement. "It is true," she said, ner statement. "It is true," sne said, and pulling out a eard of admission signed by Guardian Chambers, she handed it to the man and burst into tears. She kept enough money to pay for funeral expenses.—Philadelphia Special to Cincinnati Enquirer.

Mirage on the Maine Coast.

A few days ago there was a beautiful

mirage along the whole sea horizon. The day had been warm and calm, and to a person standing at the water's edge waves of heated air seemed to vibrate with great intensity on the sea. Sud-denly, at 5:20, the ocean assumed a wonderful appearance. Above the blue horizon seemed suspended in air a second ocean, which faded away and formed a gray vapor that appeared like an immense tidal wave and fell and rose to a great height. Vessels before invisible rose from below the horizon and visible rose from below the horizon and sailed in spectral procession through the clouds. To the eastward Monhegan rose high above Fisherman's Isle, and kept company with a ghostly island kept company with a ghostly island covered with dense forest, which quivered far beyond Pemaquid. A feet of schooners south of Fisherman's Isle suddenly at the contract of the co denly stretched upward in a grotesque manner. A great heave in the atmosphere separated the masts, and the upper sails scurried upward and dissolved, only to appear again just above. A sciner north of Damariscove was griddly trooffered interesting the control of the control o quickly transformed into a very levia-tban. Her sails changed from white to gray, and swayed upward far abov Damariscove. But on Damariscove wa. the most wonderful appearance seen To the south end of the island rose up perpendicular columnar cliffs one hunperpendicular columnar cliffs one hundred feet from the sea. The houses were nearly hidden behind them. The hill rolled together into a mound, and then unfolded to twice its real length. Just beyond the spectral cliffs the sea broke on a long ledge and the spray leaped skyward with lightning rapidity. Damariscove and Heron Isles assumed grotesque shapes and danced and stretched upward to marvelous elasticity. It awoke delightful recollections of the "Arabian Nights." Land and sea were enchanted, and under the mystic spell invisible geni transformed

tic spell invisible genii transformed them into beautiful, but fleeting illusions. The phenomena lasted till sunset, and then in the haze it slowly faded away.—Squirrel Island (Me.) Squib.

A Feature of Hotel Life.

Gossiping about the large hotels of New York and the costly habits which they stimulate, the "Lounger" of the Tribune ouches upon a hidden feature of hotel life thus: "Many a guest is in debt and cannot get away from his tel. Many a woman, apparently inde-pendent and fortunate, is wondering, while she smiles with visitors, how she shall get her trunks away from the es shall get her trunks away from the es tablishment, and what person in the house she shall strike for a loan, and at what sacrifice. People often look into the tenement house and think that the people must be very miserable there, but I wonder if they are not happier homes than some of these large hotels, where every week comes the convirues. where every week comes the reprimand that \$200 or more is due and the rules of the house are imperative."

One gets a better idea of the real Parisfrom reading that a single festival cleared a million francs for the benefit of the sufferers of Ischia. The Americans of the boulevard of the Rue de la Paix are apt to think of Paris only as a city of Passave. It is in reality as its city of pleasure. It is in reality a city of learning, of art, of science, of charity and of liberty—the worthy capital of the world's second republic.—N. Y. World.

The Dentist.

We never enter a dentist's studio without feeling uneasy. Not that we have any teeth which we cannot easily remove without his aid, but still we are remove without his aid, but still we are awe-struck in his presence. It appears that our teeth have gone into com-mittee of the whole and move by pla-teons; so we are not afraid of a sudden and unexpected attack on any strag-glers, still we remember what a time we once had with the old, back-number teeth, and wince in sympathetic memory. The rooms of these artists in ory. The rooms of these artists in bicuspids and molars are no places for quiet and cosy little chats on the follies

of the day, or the lighter and more frivolous topics of society.

The conscience of a dentist must be something like that of a champion butcher, who kills and strings up his victim, ready-dressed for the market in three minutes by a stop-watch, Chi cago time. A thoroughly good dentis should be a man with nerves like chilled steel, and a heart like live-oak. Some of the dentists with whom we are on speak-ing terms are oily fellows, with hands soft as a dude's cranium, and a seductive voice like that of a drug clerk. He will meet you at the door wrapped in a winning smile and a spotted dressing gown, and talk as soothingly as could a speculator in mining stocks, and he will inveigle you into the high-backed inquisitorial chair, and lie to you about the pain, and root around your sore and throbbing gums with his thumb-nail, and all the time smiling like an oxand all the time smiling like an ox-eyed violet. The next thing you know trouble will commence. He will slip on a pair of highly-polished forceps; there will be an uncontrolable desire on your part to open wide your mouth and howl. A short, decisive jerk, your poor head will fall back on the chair, and your mouth will be full of freshly-distilled blood; your eyes will be brim-ming with tears, and a miscellaneous

But it is the old-fashioned dentist, the country doctor of the cross-roads, who parted from him with sorrowful appre-hensions, the members would meet him with congratulations, and fried chicken and biscuits that he was unable to eat.

deal worse than the first .- Texas Sift ings.

Visits of the Living to the Dead.

le-lis. The feet were enveloped her countenance, were marked and dis-tinct. The body of her son lay at her knee. His features were as composed as if he were asleep; his color was as fresh and his flesh as plump and full as in the perfect glow of health. Perhaps the most singular phenomenon was that the bodies seemed not to have undergone the smallest decomposition, and they retained their elasticity even after being exposed to the open air for many months. Several medical gen-tlemen examined them, and an incision was made into the arm of the infant. The bodies seem to have been preserved in a liquid of the appearance of brandy, and the head inclined on a pillow containing strong-scented herbs. Balm, sage and mint were easily distinguished."—Notes and Queries.

American Triumph at Amsterdam.

The Mason & Hamlin Organ and Piano Company have just received the following cable dispatch from Mr. C. C. Bender, their agent in Holland, now representing them at the World's Ex; position at Amsterdam: "Received Diploma of Honor, the very highest award." The Mason & Hamlin cabinet organs were placed in competition at this great exhibition with a large number from the leading makers of Europe and America, and this award is but a continuation of their unbroken series of triumphs at all the great world's exhibitions for the last sixteen years. Mason & Hamlin have now won the highest awards at Paris, 1867; Vienna, 1873; Santiago, 1875; Philadelphia, 1876; Paris, 1878; Milan, 1881, and Amster-dam, 1883.—Boston Journal.

-The greatness and the prosperity of this country, after all, depend not on its financiers nor on its statemen, but on its soil and sunshine. Even Wall street itself, in a moment of frankness, says: "Its all in the crops." And the crops are good.—N. Y. World.

-Dr. Burg, of Paris, believes that sheets of copper over the stomach and abdomen are a safeguard against cholera, and he wears a copper-lined flannel

A CONGRESSMAN speaking one day, Got lame in his jaw, they do say, With the ache he was toiling, But a St. Jacobs Oiling. He said was worth all his pay.

The champion driver Dan Mace. Says for cuts and sprains,

St. Jacobs Oil holds the first place.

PEOPLE speak of gold as hard money, when in reality a gold dollar is a tender thing; legally so, in fact.—Troy (N. Y.) Times.

"GOLDEN Medical Discovery" is war-ranted to cleanse the blood from all im-purities, from whatever cause arising. For scrofula, sores of all kinds, skin and blood diseases, its effects are marvelous. Thou-sands of Testimonials from all parts. Sen I stamp for pamphlet on skin diseases. Ad-dress World's Dispensary Medical As-sociation, Buffalo, N. Y.

A POLICEMAN'S DUTY.

Policeman ED. K, HEATH, 29 North Street, Ports

Policeman Ed. K. Heath. 29 North Street, Fort-land, Mc. May II, 1883, writes:

"I have been troubled for a good many years with inflammation of the bladder, dating as far back as during the time I was in the army. I suffered with duit, heavy pains in the back and k'dneys too intense for me to describe, and tried several remedies that were recommended, and was examined by one of our best physicians, who pronounced it inflammation of the bladder; and I went to the hospital for treatment, but all medicine and treatment had seemed to fall. I was recommended to try Hunt's Remedy, as it had been used in several such cases here in Portland and vicinity. I purchased a bottle at Smith's drug store here, and found after using the first bottle that it relieved me greatly, and after using several bottles found that it did me more good than all other medicines and treatment I have received combined. And to add to my good opinion of Hunt's Remedy, I beg to state in closing that my wife has been for a long time troubled with a beginning and the hadder, with a good opinion of Huni's Remedy, I beg to state in clos-ing that my wife has been for a long time troubled with a weakness and inflammation of the bladder, with complication of other diseases peculiar to women After using only two bottles she has been completely cured; and I can say that my wife is loud in praise of this wonderful medicine, and I would highly recom-mendit to all who are suffering from kidney disease or diseases of the bladder.

the kidney complaint, and derived much benefit from

I have been affilted about one year, and reschanter treatment from the local physicians, and used a number of so-called specifies without any material help, am happy to say, after using three bottles of Hunt's Remody, I was completely cured.

I never fait to recommend it, and you are at liberty to use my name in any manner you may desire JOHN W. JOHNSTON.

country doctor of the cross-roads, who used to grin like a cannibal whenever he saw a victim approach his office—he is the one who used to fill the apple of our youthful eye. He was a terror. He who has never been put through the agonizing evolutions of a tooth-pulling drill in the back room of his office, does not know what fur is the keep does not know what fun is. He has missed several great opportunities. This rural tooth-carpenter used to per-petrate his fiendish work in one time and two motions. If the patient could not keep his head steady, the dentist would lay his head on the floor and hold it down with his knee. And if the man got alive to his family, who had

This ancient gladiatorial dentist was as remorseless in his operations as a lynching mob. He had no sympathy at all for a patient. To him a toothache was a sardonic joke. And when he threw a man on the floor, put his knee on his chest and the turnkeys on the wrong tooth and straightened him-self, it did seem as though the last end of that man had come, and was a great

"The opening of the tomb of Edward and the actual view of the dead conqueror of Scotland, enshrined in rober queror of scottand, ensuring an rooses of royalty, his crown on his head and two sceptres in his hands, his visage so well preserved as to exhibit a likeness to ar able draughtsman, a mantle of red paned with white, and at every square a jewel of chased work, besprent with pearls and red and blue stones; a superb fibula fastening the mantle on the right shoulder, studded with pearls and twenty-two joints, headed and screwed in by a brilliant sapphire; his hands bare and entire, (bone with tanned skin, but no nails). holding, the right a sceptre surmounted by a cross fleure; the left another, longer, surmounted by three clusters of oak leaves diminishing and terminating by a dove. These sceptres were of gilt metal, as also the crown of feurthe toes, planta, and talus might be felt, distinct and fleshy, and the whole body of six feet two inches long. Over the mantle was a wrapper or two, one strongly cerated." Hampden's grave, in Great Hampden Church, was accound by he biographer. Lord Nuyant pened by his biographer, Lord Nugent, and the body was found in such a per-"and the body was found in such a perfect state that the picture on the staircase of the house was known to be his from the likeness." (Timbs' "Abbeys, Castles and Ancient Halls of England and Wales.") In 1796 the bodies of Lady Kilsyth (widow of Viscount Dundee, the celebrated Claverhouse, and wife of the last Viscount Kilsyth), and her infant son were exhumed and found in the most extraordinary state of presin the most extraordinary state of pres-servation. They met their death in 1717 in Flanders by the falling in of the roof of a house in which they and a number of other Scottish exiles were assembled. Their bodies were embalmed and sent over to Scotland, where they and sent over to Scotland, where they were buried with great pomp at Kilsyth, in the family vault. The minister of Kilsyth thus describes their appearance in 1796: "The body of Lady Kilsyth was quite entire; every feature and every limb was as full as the day she was lodged in the tomb. The features, nay, the very expression of her countenance, were marked and distinct. The hody of her son lay at her
